① If $\cos \theta = \frac{\sqrt{5}}{6}$ and $\csc \theta < 0$, then what is the value of $\tan \theta$?

$$\begin{aligned} \sqrt{5}^2 + x^2 &= 6^2 \\ 5 + x^2 &= 36 \\ x^2 &= 31 \end{aligned}$$

$$x = \sqrt{31}$$

$$\tan \theta = \frac{\sqrt{31}}{\sqrt{5}} \cdot \frac{\sqrt{5}}{\sqrt{5}} = \frac{\sqrt{155}}{5}$$

$$\frac{\sqrt{155}}{5}$$

② What is the \sin , \cos , and \tan of an angle of -480° ?

$$\sin -480^\circ = -\frac{\sqrt{3}}{2}$$

$$\cos -480^\circ = -\frac{1}{2}$$

$$\tan -480^\circ = \sqrt{3}$$

①

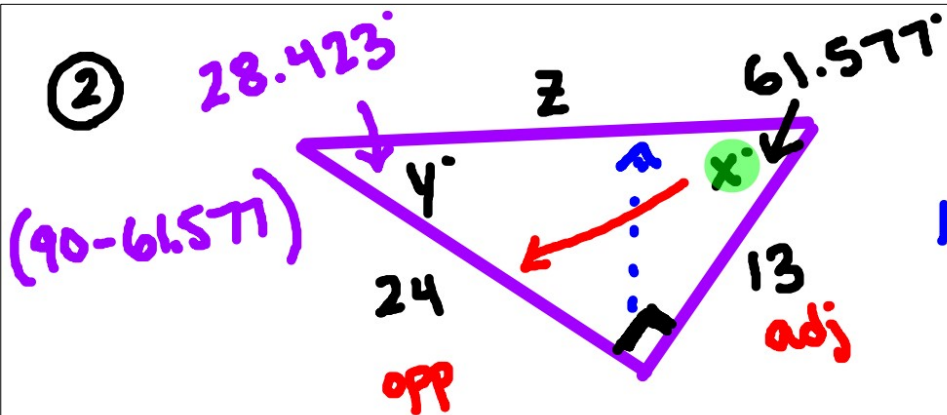

$$\sin \theta = \frac{\text{opp}}{\text{hyp}}$$

$$x \cdot \sin 48^\circ = \frac{20}{x} \cdot x$$

$$\frac{x \cancel{\sin 48^\circ}}{\cancel{\sin 48^\circ}} = \frac{20}{\sin 48^\circ}$$

$$x \approx 26.91$$

$$13^2 + 24^2 = z^2$$

$$169 + 576 = z^2$$

$$\sqrt{745} = \sqrt{z^2}$$

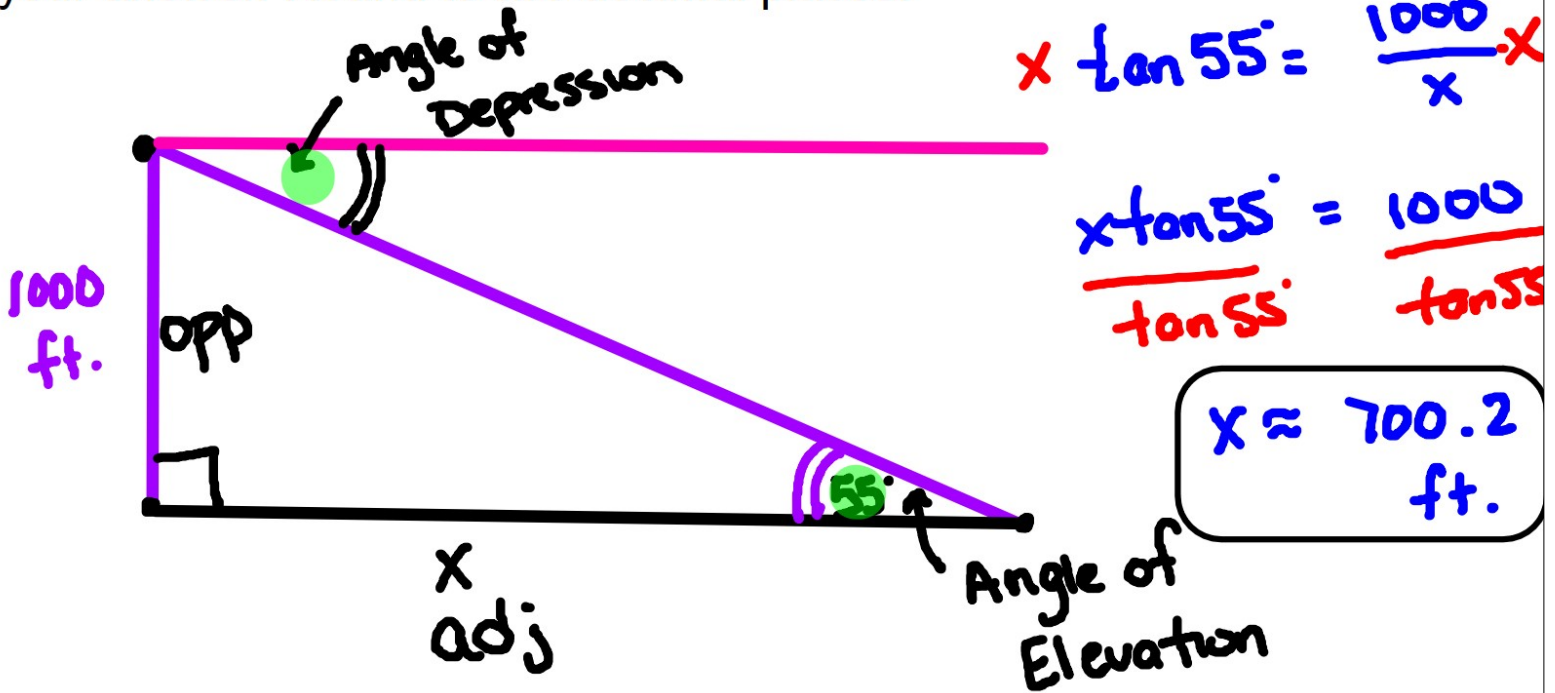

$$z = \sqrt{745}$$

$$\tan x = \frac{24}{13}$$

$$x = \tan^{-1}\left(\frac{24}{13}\right)$$

$$x \approx 61.557^\circ$$

An observer sights the top of a radio tower, which he knows is 1000 feet tall. The angle of elevation between the line of sight and the ground is 55° . How far from the tower is the observer? Draw a diagram to support your answer. Round to two decimal places.

The radius of a carousel is 8 meters. If you traveled 900° , what is the total arc length you traveled?

$$r = 8\text{m}$$

$$\theta = 900^\circ$$

$$S = r \theta$$

(θ must be in radians!)

$$\theta = 900^\circ \cdot \frac{\pi}{180^\circ} = \frac{900\cancel{\pi}}{180\cancel{\pi}} = 5\pi$$

$\frac{10\pi}{2}$ 

$$S = (8\text{m})(5\pi)$$

$$S = 40\pi \text{ m}$$

You baked a delicious chocolate cake that has a diameter of 9 inches. If the slice of cake you gave your sister has an angle of 15° , what is the area of the sector of cake your sister ate?

$$D = 9 \text{ in}$$

$$r = 4.5 \text{ in}$$

$$\Theta = 15^\circ = 15^\circ \left(\frac{\pi}{180} \right) = \frac{15\pi}{180} = \frac{\pi}{12}$$

$$A = \frac{1}{2} r^2 \Theta \quad (\text{in radians})$$

$$A = \frac{1}{2} (4.5^2) \left(\frac{\pi}{12} \right)$$

$$A = \frac{27\pi}{32} \approx 2.65 \text{ in}^2$$

Sketch the angles: -193° and 700° Then find the reference angle.

Find the 6 trig ratios of $\frac{11\pi}{3}$

$$-\frac{\sqrt{3}}{3} \rightarrow \frac{1}{\sqrt{3}}$$

$$\text{Ref } \angle = \frac{\pi}{3}$$

$$\sin \frac{\pi}{3} = \frac{\sqrt{3}}{2}$$

$$\cos \frac{\pi}{3} = \frac{1}{2}$$

$$\tan \frac{\pi}{3} = \sqrt{3}$$

$$\csc \frac{\pi}{3} = \frac{2}{\frac{\sqrt{3}}{2}} = \frac{2\sqrt{3}}{3}$$

$$\sec \frac{\pi}{3} = 2$$

$$\cot \frac{\pi}{3} = \frac{1}{\sqrt{3}} = \frac{\sqrt{3}}{3}$$

Given $\sin \theta = \frac{1}{5}$, $\tan \theta < 0$

Find $\cos \theta$

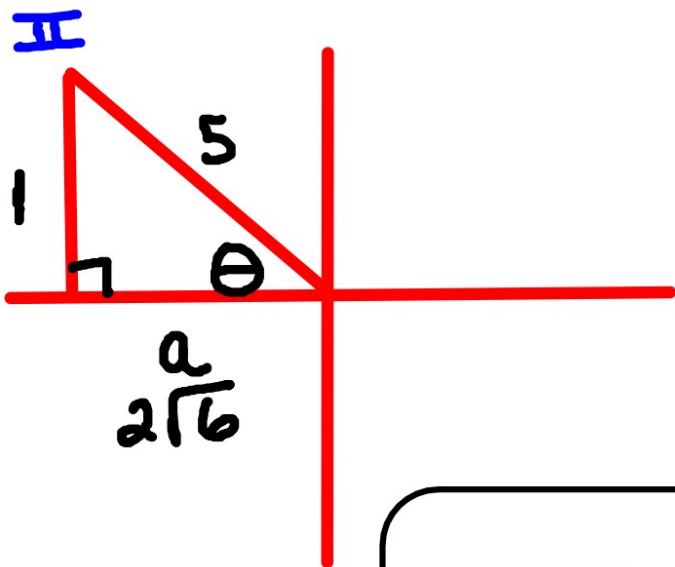

$$1^2 + a^2 = 5^2$$

$$\sqrt{a^2} = \sqrt{24}$$

$$a = \sqrt{24}$$

$$a = \sqrt{4} \sqrt{6}$$

$$a = 2\sqrt{6}$$

$$\cos \theta = \frac{2\sqrt{6}}{5}$$
