

Algebra II

Solve each for x:

$$\textcircled{1} \quad 4x^2 + 6x = 0$$

$$\textcircled{2} \quad 6x^2 - 18x = 0$$

$$\textcircled{3} \quad 2x^2 = 10x$$

$$\textcircled{4} \quad 4x^2 + 2x = 6x$$

$$\textcircled{5} \quad x^2 + 4x + 3 = 0$$

$$\textcircled{6} \quad x^2 + 9x + 18 = 0$$

$$\textcircled{7} \quad x^2 + 8x + 12 = 0$$

$$\textcircled{8} \quad x^2 + 6x - 16 = 0$$

$$\textcircled{9} \quad x^2 + 2x - 15 = 0$$

$$\textcircled{10} \quad x^2 - 3x - 10 = 0$$
